Apple Solar Energy... Leading the way in solar technology

Apple home improvements have been installing solar energy for many years and are overseen by Solar Industry experienced personnel. Apple, with 15 years highly successful trading in the home improvement market have achieved an excellent reputation for quality products, workmanship and customer service.

Apple provide the most cost effective and easy to install solar home energy systems that will reduce your energy bills and reduce your carbon footprint.

Apple only install high quality solar heating and photovoltaic (PV) systems that guarantee high performance even on cloudy days. Apple solar systems are extremely durable and reliable as they have been designed specifically for the northern hemisphere.

Number of panels	System size	Generation tariff earnings p.a.	Export tariff earnings p.a.	Electricity bill savings p.a.	Total income/savings p.a.	Total income/savings over 25 years
6	1.44 kWp	£624	£22	£90	£736	£18,396
10	2.4 kWp	£1039	£37	£150	£1,226	£36,660
12	2.88 kWp	£1,247	£45	£180	£1,472	£36,792
16	3.84 kWp	£1,663	£60	£240	£1,962	£49,056

Assumptions

Retro-fitted to existing property, installed before March 2012, assuming exporting 50% of electricity generated. Source: Energy Saving Trust Cashback Calculator August 2011.*

*Doesn't include the following; fuel price increases over time, inflation (though FITs are indexed linked).

Solar feed-in tariffs explained

There are no longer any capital grants for domestic systems. Instead a 'reward structure' has been put in place that pays you for every unit of electricity generated as you go along.

The exact figure depends on the date when the system is installed, but it is guaranteed to remain at that rate (in addition to being tax free) for a 25 year period.

For example, a system installed before April 2012, that is below 4KW and is retro-fitted to a domestic property will provide a Feed In Tariff of 43.3 and is index linked for 25 years. The best possible rates are available now.

Think how much you could save!

3 simple reasons to choose Solar Energy with Apple

- 1 Earn money
- 2 Save money
- 3 Reduce your carbon foot print

Generate tax-free income with Apple Solar Panels

Installation

We can take care of every part of the installation for you, from the initial survey, right through to completing the forms to your electricity supplier. The whole process is very straightforward, causes minimal disruption, and is often completed from scaffold erection to being signed off in less than a week! There are a few factors that can both

negatively and positively affect a systems performance, including the pitch of the prospective roof, its orientation and any potential shading in the area. By far the best way to check suitability is to have one of our experienced surveyors visit you personally and prepare a no obligation report and quotation.

Our step-by-step approach makes it easy

1 We run through some preliminary suitability checks with you on the phone

2 One of our fully trained Consultants will visit your home to measure and design a bespoke layout and prepare a detailed system costing and payback calculation. It's totally free and there's no obligation to buy.

3 Should you decide to proceed, we will then send an experienced Surveyor to carry out a detailed technical survey and design specification, plus answer any further questions you may have.

4 When, and only when, you are completely satisfied, we will arrange an installation date.

Calculate savings

Example Calculation: System size = 2.4kWp

Your illustration:

Own the system outright, earn the Feed in Tariff for every unit you generate, a little extra for what you export and enjoy free daytime electricity for the next 25 years!!

Your income and savings

Estimated annual electricity saving:	£150.00
Estimated annual income from feed in tariffs:	£1,039.00
Payback time:	10 years
Return on investment:	9.4%
Profit over 25 years:	£30,660
